

ARC-GEN GUARANTEES A JOB WELD DONE

An independent mobile welder operator is finally replacing his Arc-Gen generator after nearly 20 years of continuous use.

Carl Bradley from CPB Mobile had used the 270SD generator unit since 1989 but recently upgraded to the Arc-Gen Weldmaker 300AVC. Carl claims the 270SD is still running and operational and used constantly for many demanding jobs. However, after 18 years it can no longer stretch to the ever increasing demands placed on Carl and his team by legislation and the environment.

He said: "I have really put the 270SD through its paces by using it every day and at maximum power as well. Working on jobs for high profile clients such as Linde, Hewden Plant Hire and Continental Plant Services, the quality of the equipment has to be top notch to meet their demands. I have used other welding machines but Arc-Gen's equipment is the most consistent and reliable performer.

"Seeing as the 270SD has served me so well and Arc-Gen has provided excellent customer service, I have had no reservations about going back to them to replace the generator."

Arc-Gen chief executive Mark Hodgkins added: "We are not surprised that our generator has served Carl so well over all these years, we have a range of machines that have great longevity. But we are more than happy to facilitate his need for an upgrade.

“I am confident that he will be satisfied with the Weldmaker 300AVC which is light and easy to handle. Unlike other machines in the marketplace, the 300AVC can run the MIG gun and be used with a 6 millimetre rod, so it is ideal for Carl’s work and I am confident that it will last as long as the 270SD.”

The Weldmaker meets today’s environmental challenges by being quieter than the average generator and has ultra low fuel consumption, allowing up to 15 hours of operation without the need for refuelling.

“We are always trying to improve our products and environmental demands are at the top of the list,” added Mark.

Arc-Gen has enjoyed steady year on year growth and recently broadened its product range, adding water pumps and pressure washers, following the acquisition of West Bromwich based Hilti TW.

In addition to mobile generators, Arc-Gen’s products also include welders, lighting towers and plasma cutters which are supplied to the rental, construction and fabrication markets.
